Subject: Nutrient Criteria & Addendum

Hello-

For those that are interested or may be affected, Mike S. and Christian have completed a document that has site-specific nutrient criteria for a hand full of TMDL-needing streams in the Upper Clark Fork basin (attached). The criteria in this document will be incorporated into DEQ-12, which is going to rule-making later this Fall. Once the rules pass, DEQ-12 will become the official go-to document for nutrient criteria. We will keep you informed once the criteria are in effect.

Thanks-

Mindy
